

Clean right to get **GREEN**

Lockable cabinets and auto dilution eliminates chemical contact

The e-clean SC Blending System uses a unique diverter valve technology to deliver multiple product dilution control. The use of four separate eductors eliminates the possibility of chemical carryover, and additionally allows the user to combine high flow (bucket/auto scrubber) and low flow (bottle) dispensing in one compact unit.

The e-clean SC System has the following features:

- Three low flow products, one high flow product
- Bottle Activation: No more pressing a button for filling a spray bottle inserting the bottle activates the unit for easy filling
- Remote Filling Nozzle: For filling buckets and autoscrubbers, this feature allows you to activate the unit at hose end you don't need to bring the bucket to the unit
- Drip Tray: A drip tray is connected to the unit to catch drips, thereby decreasing the chance of slip/fall accidents near the unit

Look at the benefits provided by the e-clean SC Blending System dispenser:

- Low cost dispensing, using fewer components to deliver multiple product dilutions and flow rates
- Combination of low and high flow rates, using separate eductors
- No chemical carryover between products, since each chemical is delivered through its own eductor
- Select knob easily identifies product being dispensed to avoid errors
- Includes E gap backflow protection to meet ASSE 1055 B standards

Each e-clean bottle has its own dilution tip that mates with the chemical tube. No contact with the chemical is possible, no changing the recommended dilutions.

e-clean products are powerful solutions that are carefully formulated to give superior performance while maintaining balance with nature. e-clean products are certified safe for the environment and for the user. Clean right to get Green!
